A human right to higher education was included in the International Covenant on Economic Social and Cultural Rights (ICESCR), which came into force in 1976. Yet the world has changed significantly since the ICESCR was drafted. State legislation and policies have generally followed a neoliberal trajectory, shifting the perception of higher education from being a public good to being a commodity able to be bought and sold. This model has been criticized, particularly because it generally reinforces social inequality. At the same time, attaining higher education has become more important than ever before. Higher education is a prerequisite for many jobs and those who have attained higher education enjoy improved life circumstances. This book seeks to determine: Is there still a place for the human right to higher education in the current international context? In seeking to answer this question, this book compares and contrasts two general theoretical models that are used to frame higher

education policy: the market-based approach and the human rights-based approach. In the process, it contributes to an understanding of the likely effectiveness of market-based versus human rights-based approaches to higher education provision in terms of teaching and learning. This understanding should enable the development of more improved, sophisticated, and ultimately successful higher education policies. This book contends that a human rights-based approach to higher education policy is more likely to enable the achievement of higher education purposes than a market-based approach. In reaching this conclusion, the book identifies and addresses some strategic considerations of relevance for advocates of a human rights-based approach in this context. This Technical Note discusses the findings and recommendations made in the 2017 Financial Sector Assessment Program (FSAP) Update for Luxembourg in the area of anti-money laundering and combating the financing of terrorism (AML/CFT). Since the last FSAP update, important steps have been taken to strengthen the AML/CFT regime. Luxembourg's risk profile appears to be evolving as a result of the authorities' push for increased tax transparency. Transparency of the beneficial ownership of legal persons has also improved. AML/CFT supervision has been strengthened in recent years, but challenges remain, including with respect to lawyers. Law and legal institutions in East Asia's high-growth episodes -- Conclusion: East Asia, law and development, and today's developing countries -- Chapter 4: A new China model for the era post global financial crisis: Legal dimensions -- Introduction -- The East Asian model,

its progeny and their problems -- The emerging post Washington, post Beijing consensus (PWBC) -- Implications of the PWBC for the China model -- The decision in light of the PWBC -- The implications of the decision for legal reforms -- Conclusion European cities are contributing to the development of a more sustainable urban system that is capable of coping with economic crises, ecological challenges and social disparities in different nation-states and regions throughout Europe. This book reveals in a pluralistic way how European cities are generating new approaches to their sustainable development, and the special contribution of culture to these processes. It addresses both a deficit of attention to small and medium-sized cities in the framework of European sustainable development, and an underestimation of the role of culture, artistic expression and creativity for integrated development of the city as a prerequisite to urban sustainability. On the basis of a broad collection of case studies throughout Europe, representing a variety of regionally specific cultural models of sustainable development, the book investigates how participative culture, community arts, and more generally, creativity of civic imagination are conducive to the goal of a sustainable future of small and medium-sized cities. This is an essential volume for researchers and postgraduate students in urban studies, cultural studies, cultural geography and urban sociology as well as for policymakers and practitioners wanting to understand the specificity of European cities as hubs of innovation, creativity and artistic industriousness. Developing countries in the East Asia Pacific region will see stable

economic growth this year, bolstered by a recovery in high-income economies and the market's modest response so far to the Federal Reserve's tapering of its quantitative easing, according to the East Asia Pacific Economic Update. Developing East Asia will grow by 7.1 percent this year, largely unchanged from 2013, the report says. As a result, East Asia remains the fastest growing region in the world, despite a slowdown from the average growth rate of 8.0 percent from 2009 to 2013. In China, growth will ease slightly, to 7.6 percent this year from 7.7 percent in 2013. Excluding China, the developing countries in the region will grow by 5.0 percent, slightly down from 5.2 percent last year. Helen Curran's invaluable book aims to support new and experienced SENCOs with the task of developing and leading special educational needs provision and inclusive practice, through the exploration of practical strategies and approaches. This book takes a pragmatic approach to the issues which have historically been associated with the role of the SENCO; namely a lack of time, a lack of resources and often a lack of seniority. The book seeks to provide SENCOs with tried and tested ideas and strategies to support both the operational and strategic aspects of the role, to help SENCOs develop their role as a leader in school. The book covers the following areas: The SENCO role in policy and practice The SENCO as a leader Developing relationships with pupils and parents Challenges and opportunities within the role of SENCO A must read for any SENCO, this book draws upon case studies and real life examples, considering the ways in which SENCOs can shape and develop the status of

not only their role, but also SEN and inclusive provision in their setting. Modern scientific research has changed so much since Isaac Newton's day: it is more professional, collaborative and international, with more complicated equipment and a more diverse community of researchers. Yet the use of scientific journals to report, share and store results is a thread that runs through the history of science from Newton's day to ours. Scientific journals are now central to academic research and careers. Their editorial and peer-review processes act as a check on new claims and findings, and researchers build their careers on the list of journal articles they have published. The journal that reported Newton's optical experiments still exists. First published in 1665, and now fully digital, the Philosophical Transactions has carried papers by Charles Darwin, Dorothy Hodgkin and Stephen Hawking. It is now one of eleven journals published by the Royal Society of London. Unrivalled insights from the Royal Society's comprehensive archives have enabled the authors to investigate more than 350 years of scientific journal publishing. The editorial management, business practices and financial difficulties of the Philosophical Transactions and its sibling Proceedings reveal the meaning and purpose of journals in a changing scientific community. At a time when we are surrounded by calls to reform the academic publishing system, it has never been more urgent that we understand its history. The early years sector is going through a period of unprecedented change. This has resulted in significant challenges for the early years workforce and it is crucial that settings, teams,

leaders and individual practitioners respond to these if they wish to continue to provide the best care and education for young children. This timely text identifies and addresses the key challenges for those working with young children from managing personal and professional change, adapting to new legislation and considering new ways of thinking about children's early learning. It considers the core knowledge and understanding of good practice that enables practitioners to respond appropriately and with confidence to issues they face on daily basis. Covering a wide range of diverse topics including professional identity, neuroscience, outdoor education, literacy, special educational needs, the family and the 'risk' factor, the book encourages the reader to reflect upon their own views and attitudes towards change practice and includes: Chapter overviews and summary boxes Case studies to highlight good practice Questions to promote debate Annotated further reading Aimed specifically at those that are studying and working with children from birth to 8, this book will be a core text for Foundation Degrees in early years, early childhood studies and those working towards Early Years Teacher Status. With its comprehensive coverage of political and security matters, human rights issues, economic and social questions, legal issues, and administrative and budgetary matters, the Yearbook of the United Nations stands as the authoritative reference work on the annual activities and concerns of the Organization. Fully indexed, the Yearbook includes all major General Assembly, Security Council and Economic and Social Council resolutions and decisions, uniquely placing them in a

narrative context of United Nations consideration, deliberation and action. This sixty-eighth volume presents the work of the United Nations in dealing with recurring conflicts with severe humanitarian consequences including in the Syrian Arab Republic, where more than 12 million people were in need of basic food, clothing and shelter. The volume also highlights the Organization's rapid response to an escalatory global health emergency—the Ebola virus disease outbreak across West Africa. It documents the Organization's coordination of policy discussions to finalize a global sustainable development agenda, with the security of future generations as the core concern; and its efforts to rebuild societies emerging from conflict while keeping the fragile peace in other places. It further details the entry into force of the landmark Arms Trade Treaty, the missile downing of a passenger airliner in the midst of a geopolitical crisis in eastern Ukraine, and securing international human rights and humanitarian law and prosecuting abusers. It is not hyperbole to suggest that the foundations of post-cold war security in Europe have been badly damaged by the conflict in Ukraine since 2014. Russia's annexation of Crimea and intervention in eastern Ukraine appear to have created a 'simmering' conflict, which may take years to resolve and have profound consequences for

the European security environment. This volume explores the various political, economic and social aspects of these profound changes and their wider significance for Europe, bringing together contributions by scholars from across the continent and in various disciplinary fields to offer an authoritative, in-depth examination of the complex causes of the Ukraine crisis and the consequences for Ukrainian statehood, Ukraine's relations with Russia, Russia's own domestic governance and Russia's relations with Europe. This book was originally published as a special issue of Europe-Asia Studies. Food and Cooking Skills Education (FCSE) is a complex mix of policy and practicality, educational theory and pedagogy, classroom and government policy. This book shows how FCSE has been at the centre of a tussle between education and policy for decades. It reviews how FCSE has grappled with various significant issues of concern that threaten to marginalise it and pose problems for educational practicalities, as expectations are increased, but resources are squeezed. It assesses the debate about the significance and importance of acquiring practical food and cooking skills in a society where the purchase of ready-made food has become commonplace, and public knowledge of where our food comes from is noticeably lacking. This has contributed to the escalating incidence of diet-related diseases and the attendant cost to society, and threatened environmental sustainability. In turn, governments have reacted by proposals to make practical cooking skills a statutory National Curriculum subject as part of the armoury for tackling such costs. Based on detailed research conducted

across England and Wales, as well as comparisons with thirty-five other countries or states, the author makes recommendations for policy to manage this challenge facing contemporary society. Tobacco consumption continues to be the leading cause of preventable disease and death in the United States. The Food and Drug Administration (FDA) regulates the manufacture, distribution, and marketing of tobacco products - specifically cigarettes, cigarette tobacco, roll-your-own tobacco, and smokeless tobacco - to protect public health and reduce tobacco use in the United States. Given the strong social component inherent to tobacco use onset, cessation, and relapse, and given the heterogeneity of those social interactions, agent-based models have the potential to be an essential tool in assessing the effects of policies to control tobacco. *Assessing the Use of Agent-Based Models for Tobacco Regulation* describes the complex tobacco environment; discusses the usefulness of agent-based models to inform tobacco policy and regulation; presents an evaluation framework for policy-relevant agent-based models; examines the role and type of data needed to develop agent-based models for tobacco regulation; provides an assessment of the agent-based model developed for FDA; and offers strategies for using agent-based models to inform decision making in the future. The activities of ISIS since 2014 have brought back to centre stage a series of very old and very troubling questions about the integrity and viability of the Iraqi state. However, most analysts have framed recent events in terms of their immediate past and without the contextual background to

explain their evolution. *State and Society in Iraq* moves beyond a short-sighted analysis to place the complex and contested nature of Iraqi politics within a broader and deeper historical examination. In doing so, the chapters demonstrate that beyond the overwhelming emphasis on failed occupations, cruel tyrants, ethnic separatists and violent religious fanatics, is an Iraqi people who have routinely agitated against the state, advocated for legitimate and accountable government, and called for inter-communal harmony. When, the authors maintain, the Iraqi people are given agency in the complex process of consent, negotiation and resistance that underpin successful state-society relations, the nation can move beyond patterns of oppression and cruelty, of dangerous rhetoric and divisive politics, and towards a cohesive, peaceful and prosperous future - despite the many difficulties and the steep challenges that lie ahead. Internet intermediaries play a unique role in linking authors of content and audiences. They may either protect or jeopardize end user rights to free expression, given their role in capturing, storing, searching, sharing, transferring and processing large amount of information, data and user-generated content. This research aims to identify principles for good practices and processes that are consistent with international standards for free expression that Internet intermediaries may follow in order to protect the human rights of end users online. In 2011, the San Francisco 49ers hosted the Oakland Raiders in a preseason matchup that would become a seminal moment for fan violence. During the game, seventy fans were ejected from the stadium, one person was

beaten unconscious in the men's room, and two men were shot in the parking lot after the game. This is hardly an isolated incident. At any given game, fans get kicked out and arrested for acting out. In the spring of 2014 alone, soccer headlines screamed of a fan killed in Brazil, a supporter who punched a police horse in England, and three fans shot in Italy. But why do fans resort to such violence? What drives them to abandon societal norms and act out in unimaginable ways? *Fanaticus: Mischief and Madness in the Modern Sports Fan* explores the roots of extreme fanaticism, from organized thuggery to digital hate speech. Justine Gubar divulges outrageous and often shocking incidents, including first-hand accounts from both the transgressors and victims. Gubar reaches back into ancient times, providing a history of fan violence throughout the ages before delving into events of misbehavior, violence, and hatred in the United States and around the world. She revisits several notorious riots and tragedies throughout the United States, Europe, Asia, and Latin America in order to understand mayhem on a global scale. In addition, Gubar investigates the sports leagues and the security and beverage industries so as to explain the roots of fan misbehavior and to dispel common myths that are often invoked to understand the madness. Featuring original interviews with European football hooligans, rioting college students, stadium security experts, and many others, *Fanaticus* provides a rare window into what drives human behavior. Together, these voices create the fullest picture of modern fan violence ever written. Lesson planning and subject knowledge go hand in hand in this

exciting new edition covering all teachers need to know to confidently teach the computing curriculum as well as explore opportunities for cross-curricular teaching. The great energy transition from fossil fuels to renewable sources of energy is under way. As oil insecurity deepens, the extraction risks of fossil fuels rise, and concerns about climate instability cast a shadow over the future of coal, a new world energy economy is emerging. The old economy, fueled by oil, natural gas, and coal is being replaced with one powered by wind, solar, and geothermal energy. The Great Transition details the accelerating pace of this global energy revolution. As many countries become less enamored with coal and nuclear power, they are embracing an array of clean, renewable energies. Whereas solar energy projects were once small-scale, largely designed for residential use, energy investors are now building utility-scale solar projects. Strides are being made: some of the huge wind farm complexes under construction in China will each produce as much electricity as several nuclear power plants, and an electrified transport system supplemented by the use of bicycles could reshape the way we think about mobility. What has happened on Nauru and Manus since Australia began its most recent offshore processing regime in 2012? This essential book provides a comprehensive and uncompromising overview of the first three years of offshore processing since it recommenced in 2012. It explains why offshore processing was re-established, what life is like for asylum seekers and refugees on Nauru and Manus, what asylum seekers, refugees and staff in the offshore detention centres have

to say about what goes on there, and why the truth has been so hard to find. In doing so, it goes behind the rumours and allegations to reveal what is known – and what still is not known – about Australia’s offshore detention centres. The idea for this book is derived from the scantiness of academic references on the European Union’s policies towards the Black Sea, relative to this region’s officially stated significance for the EU. Even though the EU plays a vital role in Black Sea political agendas, the EU’s cooperation with the region is not extensively covered by academic discussions and literature. This is mostly due to the fact that the EU’s focus on foreign affairs is mainly associated with the Balkans, as part the current and potential expansion, and the Middle East, as a direct consequence of the upheaval of the Arab Spring. The Black Sea region is crucially important for the EU because of the opportunities and challenges that the region presents, both politically and socio-economically. Contributions to this book mostly focus on specific issues of EU–Black Sea cooperation, from conflict to the environment to democracy, and how these particular relationships are perceived within the region as well as through the lenses of stakeholders such as Russia, Turkey, and the USA. Overall, the collection focuses on projecting a more efficient role and a holistic strategy for the EU in its approach towards the Black Sea region, testifying to the need for a strong EU presence. For this reason, the Black Sea area remains ‘the neighbourhood too close to, yet still far from, the European Union’. This book was originally published as a special issue of the *Journal of Balkan and Near Eastern Studies*.

This report is the third OECD review of Iceland's environmental performance. It evaluates progress towards sustainable development and green growth, with a focus on the environmental aspects of Iceland's energy and tourism policies. This book constitutes the refereed proceedings of the International Conference on Applications and Techniques in Information Security, ATIS 2015, held in Beijing, China, in November 2015. The 25 revised full papers and 10 short papers presented were carefully reviewed and selected from 103 submissions. The papers are organized in topical sections on invited speeches; cryptograph; evaluation, standards and protocols; trust computing and privacy protection; cloud security and applications; tools and methodologies; system design and implementations. Cryptoassets represent one of the most high profile financial products in the world, and fastest growing financial products in history. From Bitcoin, Ethereum and Ripple's XRP-so called "utility tokens" used to access financial services-to initial coin offerings that in 2017 rivalled venture capital in money raised for startups, with an estimated \$5.6 billion (USD) raised worldwide across 435 ICOs. All the while, technologists have hailed the underlying blockchain technology for these assets as potentially game changing applications for financial payments and record-keeping. At the same time, cryptoassets have produced considerable controversy. Many have turned out to be lacklustre investments for investors. Others, especially ICOs, have also attracted noticeable fraud, failing firms, and alarming lapses in information-sharing with investors.

Consequently, many commentators around the world have pressed that ICO tokens be considered securities, and that concomitant registration and disclosure requirements attach to their sales to the public. This volume assembles an impressive group of scholars, businesspersons and regulators to collectively write on cryptoassets. This volume represents perspectives from across the regulatory ecosystem, and includes technologists, venture capitalists, scholars, and practitioners in securities law and central banking.

On February 1, 2021, Myanmar's military coup abruptly ended a decade of a civilian-military hybrid regime – a massive setback for the democratisation process. Citizens from all walks of life took to the streets and protests erupted over the following weeks, and Myanmar became the centre of global attention. This book brings up to date how the story of Myanmar's experiment with democracy unravelled over the last few years. This second edition:

- ? Traces the political transition of Myanmar from a military rule of nearly five decades to a short-lived democratic experiment;
- ? Outlines the factors that contributed to this transition and the circumstances in which it took place;
- ? Shows how political groups – especially Aung San Suu Kyi's National League for Democracy (NLD) – and the military worked together and paved the way for democratisation and what led to the failure of the NLD government;
- ? Examines the 2020 general election and the declaration of national emergency following the NLD landslide electoral win. Bringing together a balance of primary ethnographic fieldwork and nuanced analysis, this book will be of great interest to

scholars and researchers of Asian and Southeast Asian Studies, politics and political processes, democratisation process and democratic transitions, international relations and peace and conflict studies, especially those concerned with Myanmar. In January 1976, Raymond Barre, the first President of The Geneva Association, and Orio Giarini, its first Secretary General, founded The Geneva Papers on Risk and Insurance with the main goal of supporting and encouraging research in the economics of risk and insurance. At that time, research in the field of insurance was still embryonic and insurance was regarded as peripheral social activity. When sustained economic growth gained traction, the function of insurance gradually emerged as a key contributor to economic development. By integrating uncertainty into economic theory and benefiting from the progress of both financial economics and decision theory, research developed further in the field of insurance economics and risk management, and is now prolific. The Geneva Papers on Risk and Insurance undeniably contributed to this evolution and its impact on research in insurance has largely exceeded what its two founding members could have expected. This volume is a special collection of papers celebrating 40 Years of The Geneva Papers on Risk and Insurance. The collection looks back at the storied history of The Geneva Papers on Risk and Insurance and features papers from some of the esteemed authors who have contributed to the journal in its lifetime. This collection of papers highlights just a few of the many themes addressed in the papers published by the journal since it was created. Nevertheless,

the selection exemplifies the richness and variety of topics the field of insurance covers. The book analyses the emerging centre-periphery divisions within the European Union which result from the unprecedented conditions created by the 2008-09 global financial crisis and the subsequent Eurozone sovereign debt crisis. The multiple layers of policy coordination which emerged in response to the crisis have initiated a process by which the EU is increasingly divided in terms of the level of vertical integration between the Eurozone core group and differentiated peripheries amongst the outsiders. At the same time the sovereign debt crisis has created a periphery of predominantly Southern European countries within the Eurozone that became dependent on external financial support from the other member states. The contributions in this book critically examine various aspects of the emerging internal post-crisis constellation of the EU. The main focus lies on national and supranational governance issues, national dynamics and dynamics in the Eurozone core as well as in the periphery. This book was originally published as a special issue of *Perspectives on European Politics and Society*. Data integrity is a critical aspect to the design, implementation, and usage of any system which stores, processes, or retrieves data. The overall intent of any data integrity technique is the same: ensure data is recorded exactly as intended and, upon later retrieval, ensure the data is the same as it was when originally recorded. Any alternation to the data is then traced to the person who made the modification. The integrity of data in a patient's electronic health record is critical to

ensuring the safety of the patient. This book is relevant to production systems and quality control systems associated with the manufacture of pharmaceuticals and medical device products and updates the practical information to enable better understanding of the controls applicable to e-records. The book highlights the e-records suitability implementation and associated risk-assessed controls, and e-records handling. The book also provides updated regulatory standards from global regulatory organizations such as MHRA, Medicines and Healthcare Products Regulatory Agency (UK); FDA, Food and Drug Administration (US); National Medical Products Association (China); TGA, Therapeutic Goods Administration (Australia); SIMGP, Russia State Institute of Medicines and Good Practices; and the World Health Organization, to name a few. In its six-decade history, the German Federal Constitutional Court has become one of the most powerful and influential constitutional tribunals in the world. It has played a central role in the establishment of liberalism, democracy, and the rule of law in post-war West Germany, and it has been a model for constitutional tribunals in many other nations. The Court stands virtually unchallenged as the most trusted institution of the German state. Written as a complete history of the German Federal Constitutional Court from its founding in 1951 up into the twenty-first century, this book explores how the court became so powerful, and why so few can resist its strength. Founded in 1951, the Court took root in a pre-democratic political culture. The Court's earliest contributions were to help establish liberal values and fundamental rights

protection in the young Federal Republic. The early Court also helped democratize West German politics by reinforcing rights of speech and information, affirming the legitimacy of parliamentary opposition, and checking executive power. In time, as democratic values took hold in the country at large, the Court's early role in nurturing liberalism and democracy led many West Germans to view the Court not as a constraint on democracy, but as a bulwark of democracy's preconditions. In later decades, the Court played a stabilizing role - mediating political conflicts and integrating societal forces. Citizens disenchanted with partisan politics looked to the Court as a guardian of enduring values and a source of moral legitimacy. Through a comprehensive narrative of the Court's remarkable rise and careful analysis of its periodic crises, the work carefully dissects the success of the Court, presenting not only a traditional work of legal history, but a public history - both political and societal - as well as a doctrinal and jurisprudential account. Structured around the Court's major decisions from 1951 to 2001, the book examines popular and political reactions to those decisions, drawing heavily on newspaper accounts of major judgments and material from the archives of individual politicians and judges. The result is an impressive case study of the global phenomenon of constitutional justice. Validation of computer systems is the process that assures the formal assessment and report of quality and performance measures for all the life-cycle stages of software and system development, its implementation, qualification and acceptance, operation, modification, requalification,

maintenance and retirement (PICS CSV PI 011-3). It is a process that demonstrates the compliance of computer systems functional and non-functional requirements, data integrity, regulated company procedures and safety requirements, industry standards, and applicable regulatory authority's requirements. Compliance is a state of being in adherence to application-related standards or conventions or regulations in laws and similar prescriptions. This book, which is relevant to the pharmaceutical and medical devices regulated operations, provides practical information to assist in the computer validation to production systems, while highlighting and efficiently integrating worldwide regulation into the subject. A practical approach is presented to increase efficiency and to ensure that the validation of computer systems is correctly achieved. This book presents the hitherto unstudied variety of ways that human rights socialisation is attempted in the context of regional organisations, arguing that existing conceptual accounts of this phenomenon need to be expanded to best explain this diversity. By placing the study of the European Union's relationship with Turkey alongside parallel studies of the Association of Southeast Asian Nations engagement with Myanmar, and the Organization of American States history with Panama, this book argues that rights socialisation efforts are far more diverse than previously thought. Alongside the conditionality that dominates the EU experience, and that has received the majority of existing academic attention, this book argues that both the politics of social influence, the strategic manipulation of legitimacy and the politics of

debate over the meaning of membership also drive socialisation efforts. This book situates these socialisation efforts along the journey states take when applying to, joining and then maintaining membership of, a regional organisation, and further distinguishes between what conditions are necessary for socialisation to be attempted and what further requirements are needed for that attempt to be successful. To appreciate the diversity of socialisation politics revealed, this book constructs an inclusive conceptual framework drawing on both rational choice and constructivist theorising and will be of interest to students of Politics and International Relations. The two-volume set LNCS 10769 and 10770 constitutes the refereed proceedings of the 21st IACR International Conference on the Practice and Theory of Public-Key Cryptography, PKC 2018, held in Rio de Janeiro, Brazil, in March 2018. The 49 revised papers presented were carefully reviewed and selected from 186 submissions. This work analyzes and compares the legal framework for foreign investments in the mining sector in Australia, South Africa and Colombia. The admission of foreign investments, corporate structure

requirements, ownership of minerals and mineral rights, mining licenses, land access, performance requirements, distribution of profits and the tax regime, repatriation of profits, national and international dispute resolution mechanisms and the question of the Social License to Operate (SLO) / Corporate Social Responsibility (CSR) policies are discussed in detail. The work concludes with an outlook on the future regulation of foreign mining investments and finally suggests the development of an International Mining Investment Law. In this latest edition of Sales Force Management, Mark Johnston and Greg Marshall continue to build on the tradition of excellence established by Churchill, Ford, and Walker, increasing the book's reputation globally as the leading textbook in the field. The authors have strengthened the focus on managing the modern tools of selling, such as customer relationship management (CRM), social media and technology-enabled selling, and sales analytics. It's a contemporary classic, fully updated for modern sales management practice. Pedagogical features include: Engaging breakout questions designed to spark lively discussion Leadership challenge assignments and mini-cases to help students understand and apply the principles they have learned in the classroom Leadership, Innovation, and Technology boxes that simulate real-world challenges faced by salespeople and their managers New Ethical Moment boxes in each chapter put students on the firing line of making ethical choices in sales Role Plays that enable students to learn by doing A selection of comprehensive sales management cases on the companion website A companion website

features an instructor's manual, PowerPoints, and other tools to provide additional support for students and instructors. The book is aimed at all those studying on Foundation Degrees in supporting primary and early years teaching and learning, and particularly those working at levels 4 and 5. It is written in an accessible style with a focus on work-based professional development and encourages critical reflection throughout. It starts with a discussion of reflective practice, and includes helpful guidance on developing effective study skills. Each chapter then focuses on a key topic in education, learning and development, considers any relevant policies and legislation, examines educational theories in relation to professional practice and provides concise case studies to contextualise the learning. It provides up-to-date and relevant material on supporting the new national curriculum, safeguarding, SEN and inclusion issues, and schools as organisations. It also covers the competencies for Higher Level Teaching Assistants. The first full-length exposition of what it terms a global city-global risks nexus, this volume crosses disciplinary boundaries to draw upon research from Security Studies; Geography; Sociology; and Urban Studies. Innovative in its approach integrating theories about Global Cities with those positing a Global Risk Society, Yee-Kuang Heng positions this research in the midst of two concurrent global trends that will gain more significance in coming years. The world is experiencing the consequences of not only rapid globalisation, but also urbanization. In 2008, the UN declared that more than half the world's population was now urban. At the same time, highly connected global cities

like New York, London, Tokyo and Singapore also face rapidly spreading global risks such as pandemics and financial crises. Unique in developing a typology of global risks that threaten a global city like Singapore, beyond its Asian focus, the book also draws out thematic and policy lessons pertinent to other global cities. 'Global cities' do not simply materialize. They are dependent on a range of stakeholders at various levels that produce and re-produce its command and control capabilities, in the face of global risks. Singapore's experiences managing global risks in the financial; aviation; and maritime domains are common concerns shared by many countries and cities that have, or aspire to develop, similar critical infrastructure. An up-to-date guide to an overview of authentication in the Internet of Things (IoT) The Internet of things (IoT) is the network of the countless physical devices that have the possibility to connect and exchange data. Among the various security requirements, authentication to the IoT is the first step to prevent the impact of attackers. IoT Security offers an important guide into the development of the many authentication mechanisms that provide IoT authentication at various levels such as user level, device level and network level. The book covers a wide range of topics including an overview of IoT and addresses in detail the security challenges at every layer by considering both the technologies and the architecture used. The authors—noted experts on the topic—provide solutions for remediation of compromised security, as well as methods for risk mitigation, and offer suggestions for prevention and improvement. In addition, IoT Security offers a

variety of illustrative use cases. This important book: Offers an authoritative reference designed for use by all IoT stakeholders Includes information for securing devices at the user, device, and network levels Contains a classification of existing vulnerabilities Written by an international group of experts on the topic Provides a guide to the most current information available on IoT security Written for network operators, cloud operators, IoT device manufacturers, IoT device users, wireless users, IoT standardization organizations, and security solution developers, IoT Security is an essential guide that contains information on security features, including underlying networks, architectures, and security requirements. The OECD Secretary-General's annual report to ministers covers not only the activities of the SG and his office, horizontal programs and activities of the directorates but also the activities of its agencies and special entities. This volume examines the trajectory of Pakistan's democratic transition and the implications of this change for its security. In May 2013, for the first time in its 66-year history, Pakistan saw an elected government complete a full term in office and transfer power through the ballot box to another civilian government. At this important moment in Pakistan's history, this collection brings together twelve leading academics and writers with an aim to provide a far-reaching analysis of the current situation in Pakistan and emergent trends. Drawing on history, diverse theoretical perspectives, and empirical evidence, three themed sections deal respectively with democratic transition (including Islam and democracy, civil-military relations, and

economics), contested borders and contested spaces (the Pashtun belt, Kashmir, and intra-Islamic conflict), and regionalism (bilateral relations from both Pakistani and Indian perspectives, US-Pakistan relations, and nuclear weapons dynamics). Together the contributors explore the status of Pakistan's democratic transition, contemporary security dynamics, and wider regional security and political dynamics, and the complex interplay of the three, to provide a wide-ranging analysis of Pakistan's contemporary national and regional challenges, its impact on the region, and evidence of some positive trends for Pakistan's future. The book will be of much interest to students of South Asian politics, Asian security, governance, and IR in general as well as policy-makers, diplomats, and military professionals.
