Translation and Migration Apr 16 2020 Translation and Migration examines the ways in which the presence or absence of translation in situations of migratory movement has currently and historically shaped social, cultural and economic relations between groups and individuals. Acts of cultural and linguistic translation are discussed through a rich variety of illustrative literary, ethnographic, visual and historical materials, also taking in issues of multiculturalism, assimilation, and hybridity analytically re-framed. This is key reading for students undertaking Translation Studies courses, and will also be of interest to researchers in sociology, cultural studies, anthropology and migration studies.

Knowledge and Politics (RLE Social Theory) Mar 28 2021 Karl Mannheim's *Ideology and Utopia* has been a profoundly provocative book. The debate about politics and social knowledge that was spawned by its original publication in 1929 attracted the most promising younger scholars, some of whom shaped the thought of several generations. The book became a focus for a debate on the methodological and epistemological problems confronting German social science. More than thirty major papers were published in response to Mannheim's text. Writers such as Hannah Arendt, Ernst Robert Curtius, Max Horkheimer, Herbert Marcuse, Helmuth Plessner, Hans Speier and Paul Tillich were among the contributors. Their positions varied from seeing in the sociology of knowledge a sophisticated reformulation of the materialist conception of history to linking its popularity to a betrayal of Marxism. The English publication in 1936 defined formative issues for two generations of sociological self-reflection. *Knowledge and Politics* provides an introduction to the dispute and reproduces the leading contributions. It sheds new light on one of the greatest controversies that have marked German social science in the past hundred years.

Havana Storm Mar 16 2020 Renowned marine adventurer Dirk Pitt returns to stem a toxic outbreak in the thrilling novel from the grand master of adventure and #1 New York Times-bestselling author. While investigating an unexplained poisonous spill in the Caribbean Sea that may ultimately threaten the United States, Dirk Pitt unwittingly becomes involved in something even more dangerous—a post-Castro power struggle for the control of Cuba. Meanwhile, Pitt's children, marine engineer Dirk and oceanographer Summer, are on an investigation of their own, chasing an Aztec stone that may reveal the whereabouts of a vast historical Aztec treasure. The problem is, that stone was believed to have been destroyed on the battleship *Maine* in Havana Harbor in 1898, which brings them both to Cuba as well—and squarely into harm's way. The whole Pitt family has been in desperate situations before . . . but perhaps never quite as dire as the one facing them now.

Current Sense Amplifiers for Embedded SRAM in High-Performance System-on-a-Chip Designs Dec 17 2022 System-on-a-chip (SoC) designs result in a wide range of high-complexity, high-value semiconductor products. As the technology scales towards smaller feature sizes and chips grow larger, a speed limitation arises due to an increased RC delay associated with interconnection wires. Innovative circuit techniques are required to achieve the speed needed for high-performance signal processing. Current sensing is considered as a promising circuit class since it is inherently faster than conventional voltage sense amplifiers. However, especially in SRAM, current sensing has rarely been used so far. Practical implementations are challenging because they require sophisticated analog circuit techniques in a digital environment. The objective of this book is to provide a systematic and comprehensive insight into current sensing techniques. Both theoretical and practical aspects are covered. Design guidelines are derived by systematic analysis of different circuit principles. Innovative concepts like compensation of the bit line multiplexer and auto-power-down will be explained based on theory and experimental results. The material will be interesting for design engineers in industry as well as researchers who want to learn about and apply current sensing techniques. The focus is on embedded SRAM but the material presented can be adapted to single-chip SRAM and to any other current-providing memory type as well. This includes emerging memory technologies like magnetic RAM (MRAM) and Ovonic Unified Memory (OUM). Moreover, it is also applicable to array like structures such as CMOS camera chips and to circuits for signal transmission along highly capacitive busses.

Signal Transduction — Single Cell Techniques May 10 2022 A variety of powerful techniques for monitoring and analysing events during signal

transduction at the single cell level are described in this lab manual. An introductory section on cell handling includes guidelines for constructing a perfusion chamber. A main section of the book presents protocols on fluorescence techniques such as flow cytometry, microfluorescence, ion imaging and confocal microscopy. The electrophysiological section illustrates multiple applications of the patch-clamp technique in various cell types from both animals and plants. Emphasis is put on calibration and validation of the different techniques to measure changes of membrane potential, and intracellular ion concentration or pH.

Harmonies of Disorder Oct 11 2019 This book presents the entire body of thought of Norbert Wiener (1894-1964), knowledge of which is essential if one wishes to understand and correctly interpret the age in which we live. The focus is in particular on the philosophical and sociological aspects of Wiener's thought, but these aspects are carefully framed within the context of his scientific journey. Important biographical events, including some that were previously unknown, are also highlighted, but while the book has a biographical structure, it is not only a biography. The book is divided into four chronological sections, the first two of which explore Wiener's development as a philosopher and logician and his brilliant interwar career as a mathematician, supported by his philosophical background. The third section considers his research during World War II, which drew upon his previous scientific work and reflections and led to the birth of cybernetics. Finally, the radical post-war shift in Wiener's intellectual path is considered, examining how he came to abandon computer science projects and commenced ceaseless public reflections on the new sciences and

technologies of information, their social effects, and the need for responsibility in science.

Post-Translational Modifications in Health and Disease Aug 01 2021 Post-translational modifications serve many different purposes in several cellular processes such as gene expression, protein folding and transport to appropriate cell compartment, protein-lipid and protein-protein interactions, enzyme regulation, signal transduction, cell proliferation and differentiation, protein stability, recycling and degradation. Although several-hundred different modifications are known, the significance of many of them remains unknown. The enormous versatility of the modifications which frequently alter the physico-chemical properties of the respective proteins represents an extraordinary challenge in understanding their physiological role. Since essential cellular functions are regulated by protein modifications, an improvement of current understanding of their meaning might allow new avenues to prevent and/or alleviate human and animal diseases.

European Union Enlargement May 18 2020 The continuous expansion of the European Union has transformed its very own self-conception. While Eastern enlargement was widely celebrated as the 'reuniting of Europe', the sheer number of applicants, their low economic development and the need for new states to transform in accordance with EU values required considerable adjustments to the EU's self-image. By examining the European Council's contentious approval of the Mediterranean and Central and Eastern European countries in the 1970s and 1990s, this book investigates why the European Union enlarges. Based on new and hitherto not analysed data, it introduces the concept of 'anomie' to the discourse and, in doing so, makes a timely contribution to the literature of constitutional politics and enlargement of the European Union. This text will be of key interest to scholars and students of the European Union, area studies (European studies, central and east European studies, Mediterranean studies) and more broadly comparative politics and constitutional politics.
