the 80' s. It is regarded as the most efficient way to improve national economy and to enrich the quality of life. The key to productivity improvement is advanced automation, especially computer-integrated automation for engineering design and office operations as well as manufacturing processes. This is the theme of 1983 International Conference on Advanced Automation, ICAA-83. This book contains the articles which are the revised and updated version of the papers presented at the ICAA-83 Conference.

Traditionally, automation is synonymous with mechanization; but this Conference has treated automation from a different point of view. We consider automation as a process to unify various automated information processing systems for performing business, administration, design, engineering and manufacturing functions, in addition to the traditional fixed automation in production. In other words, design automation and office automation form an integral part of factory automation to accomplish comprehensive computer-integrated

manufacturing and production. In engineering and manufacturing today, quality design and high productivity are synonymous with the use of computers, robots, expert systems, and other computer-based technologies. The greater the degree of computer-based automation exploited and implemented, the greater a nation's ability to survive in tomorrow's extremely competitive world market. This pilot study measures and compares administrative burdens in the transport sector across eleven member countries:

Belgium, Canada, Denmark, France, Germany, Italy, Netherlands, New Zealand, Norway, Sweden, and Turkey. Kinesiology taping on human athletes is all the rage: widely used by physical therapists, chiropractors, and personal trainers, we see it on Olympians, runners, basketball players—on amateurs and professionals. The idea behind taping is that it provides incredible support and stabilization of ligaments and tendons while simultaneously stretching and flexing like a "second skin" to allow full range of motion. It can also activate or relax muscles, depending

on its application. Our equine athletes can benefit hugely from taping techniques, and this terrific guidebook provides the ultimate reference for understanding both the uses of kinesiology tape and its numerous applications. With hundreds of color photographs and step-by-step instructions for the do-it-yourselfer, equine physiotherapist Katja Bredlau-Morich explains the following forms of kinesiology taping: Muscle - Lymphatic - Scar - Fascia - Space - Hematoma - Stabilization - Tendon - Cross In addition, numerous case studies demonstrate how taping can change your horse's life,

keeping him pain-free and performing his best for years to come. Behavior modeling has been a highly successful training method for centuries. However, refinements based upon extensive research about its components began only recently. This manual presents the fruits of this research, and provides hands-on, proven, detailed instructions for productive implementation. It is designed to be used in conjunction with BEHAVIOR MODELING TRAINING FOR DEVELOPING SUPERVISORY SKILLS: TRAINEE MANUAL by the same author, which contains multiple copies of various forms that the

trainee will use. Caring for the Painful Thumb - More Than a Splint by Jan Albrecht, an Occupational Therapist and Certified Hand Therapist. It is a teaching tool for patients and therapists. With over 200 color illustrations, it is two books in one: half the book for the right hand and half for left to help patients visualize mobilization and stabilization techniques. Terminology a patient can understand. Textile taping for the painful thumb CMC joint described in detail. 52 sturdy pages, spiral bound. This durable book can be used at the treatment table, or independently by

the patient at the completion of therapy. Pages can be copied for handouts.
