Teaching Mathematical Modelling: Connecting to Research and Practice Oct 23 2020 This book provides readers with an overview of recent international research and developments in the teaching and learning of modelling and applications from a variety of theoretical and practical perspectives. There is a strong focus on pedagogical issues for teaching and learning of modelling as well as research into teaching and practice. The teaching of applications of mathematics and mathematical modelling from the early years through primary and secondary school and at tertiary level is rising in prominence in many parts of the world commensurate with an ever-increasing usage of mathematics in business, the environment, industry and everyday life. The authors are all members of the International Community of Teachers of Mathematical Modelling and Applications and important researchers in mathematics education and mathematics. The book will be of interest to teachers, practitioners and researchers in universities, polytechnics, teacher education, curriculum and policy.?

The Expansion of the Educational System Dec 05 2021 This volume contains a general introduction to the whole series, followed by seven chapters giving most of the quantitative information in compact form. The introduction discusses some current issues and problems in education: the economic value of education to the individual and to society, the effects of automation, the role of the school in social and emotional development, vocational training and physical development, and the relationship between education and social class. The main body of the text describes the quantitative growth of the educational system and is organized into seven topics: characteristics of the population, school enrollment, the proliferation of educational institutions, university enrolment, enrolment in other post-secondary institutions, and the financing of the system. It contains much specialized statistical material including 46 charts and 225 tables, and will be an excellent work of reference.

Writing Instruction That Works Sep 21 2020 Backed by solid research, *Writing Instruction That Works* answers the following question: What is writing instruction today and what can it be tomorrow? This up-to-date, comprehensive book identifies areas of concern for the ways that writing is being taught in today's secondary schools. The authors offer far-reaching direction for improving writing instruction that assist both student literacy and subject learning. They provide many examples of successful writing practices in each of the four core academic subjects (English, mathematics, science, and social studies/history), along with guidance for meeting the Common Core standards. The text also includes sections on Technology and the Teaching of Writing and English Language Learners.

University English for Academic Purposes in China May 10 2022 This book uses an in-depth, phenomenological interview approach to explain the generational characteristics of today's Chinese university youths and the critical dispositions they believe indispensable in acquiring English as an academic language in and outside school settings. By presenting the authentic voices of the recruited participants, the book clarifies how English for academic purposes (EAP), as an emerging global phenomenon and a research-informed practice, enables and empowers them for conscious self-transformation and critical awareness development through language study. The book also explores issues arising in the fields of general English language teaching as well as traditional and critical EAP, and discusses university English language learners' learning needs and rights. The book further promotes a dynamic and transformative University EAP pedagogy of particularity, practicality, and possibility moving from the oppression of language education to its liberation, and the increasing critical consciousness among the present and future university youths in a time of great social changes.
