"Mr. Dahlstrom...has written a superb history of the tractor and this long-forgotten period of capitalism in U.S. agriculture. We now know the whole story of when farming, business and the free-market economy diverged, divided and conquered." —Wall Street Journal Discover the untold story of the “tractor wars,” the twenty-year period that introduced power farming—the most fundamental change in world agriculture in hundreds of years. Before John Deere, Ford, and International Harvester became icons of American business, they were competitors in a forgotten battle for the farm. From 1908-1928, against the backdrop of a world war and economic depression, these brands were engaged in a race to introduce the tractor and revolutionize farming. By the turn of the twentieth century, four million people had left rural America and moved to cities, leaving the nation’s farms shorthanded for the work of plowing, planting, cultivating, harvesting, and threshing. That’s why the introduction of the tractor is an innovation story as essential as man’s landing on the moon or the advent of the internet—after all, with the tractor, a shrinking farm population could still feed a growing world. But getting the tractor from the boardroom to the drafting table, then from factory and the farm, was a technological and competitive battle that until now, has never been fully told. A researcher, historian, and writer, Neil Dahlstrom has spent decades in the corporate archives at John Deere. In Tractor Wars, Dahlstrom offers an insider’s view of a story that entwines a myriad of brands and characters, stakes and plots: the Reverend Daniel Hartsough, a pastor turned tractor designer; Alexander Legge, the eventual president of

International Harvester, a former cowboy who took on Henry Ford; William Butterworth and the oft-at-odds leadership team at John Deere that partnered with the enigmatic Ford but planned for his ultimate failure. With all the bitterness and drama of the race between Ford, Dodge, and General Motors, Tractor Wars is the untold story of industry stalwarts and disruptors, inventors, and administrators racing to invent modern agriculture—a power farming revolution that would usher in a whole new world. Prior to 1862, when the Department of Agriculture was established, the report on agriculture was prepared and published by the Commissioner of Patents, and forms volume or part of volume, of his annual reports, the first being that of 1840. Cf. Checklist of public documents ... Washington, 1895, p. 148. This book highlights recent findings in industrial, manufacturing and mechanical engineering, and provides an overview of the state of the art in these fields, mainly in Russia and Eastern Europe. A broad range of topics and issues in modern engineering are discussed, including the dynamics of machines and working processes, friction, wear and lubrication in machines, surface transport and technological machines, manufacturing engineering of industrial facilities, materials engineering, metallurgy, control systems and their industrial applications, industrial mechatronics, automation and robotics. The book gathers selected papers presented at the 4th International Conference on Industrial Engineering (ICIE), held in Moscow, Russia in May 2018. The authors are experts in various fields of engineering, and all papers have been carefully reviewed. Given its scope, the book will be of interest to a wide readership, including mechanical and production engineers, lecturers in engineering disciplines, and engineering graduates.

The international or multi-national corporation has become an important phenomenon in today's business world and Massey-Ferguson is an ideal example of such an organization. Through its predecessor companies it can train its history to 1847, and so it has encountered virtually all the difficulties and developments of the last hundred years in business organization and management science. The development has not been straightforward for it has been much more than the growth of a single company in an expanding market. Management reorganization and the introduction of new management planning and control techniques contributed a good deal to the company's expansion, and because mergers played a vital role, the history of other companies is also involved. Dr. Neufeld's study concentrates on the years after the Second World War, a period in which the company's international operations became increasingly complex. He records the events that helped to shape the company's character and structure, and at the same time investigates the company's successes and failures in adjusting to a changing national and international business environment. His study reveals why Massey-Ferguson developed into a global corporation, an organization that considers the whole of the international environment when making decisions relating to the allocation of its marketing, purchasing, manufacturing and engineering activities.
